

## Quantitative Brokers Named Best TCA Provider in 2016 Buy-Side Technology Awards

Quantitative Brokers (“QB”), a leading provider of agency algorithms for futures and fixed income markets, has won “Best TCA Provider to the Buy Side” in the 2016 Buy-Side Technology Awards, sponsored by Waters Technology.

The Buy-Side Technology Awards recognize leading technologies and vendors in 32 distinct categories, following an extensive review process by a panel of prominent industry journalists, analysts, and experts.

This news is among a growing list of industry recognitions for QB. The firm was awarded "Best Trading and Execution Technology" in the 2015 and 2016 CTA Intelligence US Services Awards, as well as "Best Fixed Income Algorithm Provider" in the Markets Choice Awards.

QB’s transaction cost analysis (TCA) platform allows traders full transparency into execution performance via a secure, user-friendly website that compiles aggregate statistics and access to visual analytics on individual trades. In addition, QB offers other ways to access TCA data, including PDF reports and CSV files. In the past year, QB has further enhanced its TCA offering through the addition of the tracking of the settlement price benchmark for a new algorithmic strategy, as well as debuting its multi-broker TCA capability, which helps clients perform peer to peer execution performance analysis on multiple brokers and algorithmic strategies.

Providing unrivaled transparency to under-serviced markets, QB is recognized for a commitment to identifying and minimizing slippage for futures and US cash Treasury executions, servicing many of the world's largest asset managers, global macro hedge funds, CTAs, and proprietary trading firms.
